ASP.NET Introduction

Duration: 3 Days

Overview:

To build effective and eye-catching database-driven web sites, you must first have a solid framework on which to run your web pages as well as a rich environment in order to create and program these web pages. Microsoft's ASP.NET 3.5 and Visual Web Developer 2008 combine forces to provide you with the ultimate platform on which you can create dynamic and interactive web applications.

Aspect Training's ASP.NET Introduction course begins by demonstrating how to obtain and install Visual Web Developer. With each successive session, the course introduces you to new technologies that build on knowledge gained from previous sessions. You'll learn that both ASP.NET 3.5 and Visual Web Developer now come with an extensive set of tools that will help you smoothly program your web applications. With the knowledge you gain from this course, you will be able to create feature-rich, database-driven, interactive web sites.

Prerequisites:

Knowledge of VB.NET or C#.NET is required prior to this course.
